

Nephelometric system based on ISO 7027 for the automatic and continuous measurement of turbidity in pure water in water steam cycles.

Monitor AMI Turbiwell Power

- Non-contact turbidimeter: System optics is not in direct contact with sample, no fouling on optical surfaces.
- Complete system including optoelectronics, sample chamber, turbidimeter and sample flow meter mounted on stainless steel panel.
- Suitable for the measurement of other liquids of which the turbidity correlates with the concentration of a suspended solid or an emulsified liquid, e.g. an oil water emulsion.
- Measuring range: 0.000 - 200.0 FNU/NTU
Automatic range switching.
- Precision: ± 0.003 FNU/NTU or 1% of reading.
- Manual or automated draining of the sample chamber.
- Easy user menus in English, German, French and Spanish.
Simple programming of all parameters by keypad.
- Electronic record of major process events and calibration data.
- Real-time clock for time stamp in data logs and for automated functions.
- Data logger for 1'500 data records stored at selectable intervals.
- Big back-lit LCD display for the reading of all measured values and status information simultaneously.
- Measurement values are available as analog output signals.
- Potential-free alarm contact as summary alarm indication for programmable alarm values and for instrument faults.
- Input for potential-free contact to freeze the measuring value or to interrupt control in automated installations (hold function or remote-off).
- Factory tested, ready for installation and operation.
